

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (currently amended): A data marker integrated device communication system, comprising:

a data marker integrated device configured to store a data mark in response to bookmarking of a broadcast clip;

said data marker integrated device comprising a first device which is configured for local, short range, wireless communication;

a second network device configured ~~to establish~~ for establishing a first wireless communication connection with the ~~data marker integrated~~ first device to receive said data mark from said ~~data marker integrated~~ first device;

said second device configured for establishing a separate second wireless connection; [[and]]

a server ~~terminal~~ configured to connect over said second wireless connection to said second network device for data communication through said second device with said first device;

said server is configured for retrieving playlist data in response to receipt of said data mark from said first device; and

said server is configured for communicating over a data network with a user terminal so that said user terminal can access said playlist data through a user account on said server when connected over said data network.

2. (previously presented): The system of claim 1 wherein said data mark includes time stamp information.

3. (original): The system of claim 1 wherein said data marker integrated device includes one of an electronic music marker integrated radio, and an electronic music marker integrated audio playback device.

4. (currently amended): The system of claim 1 wherein said ~~network~~ second device includes one of a wireless application protocol (WAP) enabled mobile telephone, an I-mode mobile telephone, and an internet access enabled personal digital assistant.

5. (currently amended): The system of claim 1 wherein said wireless communication between said ~~network~~ second device and said data marker integrated device is established with a Bluetooth communication protocol.

6. (currently amended): The system of claim 1 wherein said data marker integrated device includes an interface ~~interlace~~ unit configured to establish wireless communication under a Bluetooth communication protocol.

7. (currently amended): The system of claim 6 wherein said ~~network~~ second device includes an interface unit configured to establish wireless communication under a Bluetooth communication protocol.

8. (original): The system of claim 7 wherein said Bluetooth communication protocol operates at approximately 2.4 GHz.

9. (currently amended): The system of claim 1 wherein said data marker integrated device is configured to transmit a device identification code to said second ~~network~~ device.

10. (currently amended): The system of claim 1 wherein said server ~~terminal~~ is configured to receive said data mark from said ~~network~~ second device.

11. (currently amended): The system of claim 10 wherein said server ~~terminal~~ is further configured to transmit a transmission acknowledgement message to said ~~network~~ second device.

12. (currently amended): The system of claim 11 wherein said ~~network~~ second device is configured to display said transmission acknowledgement message.

13. (currently amended): The system of claim 11 wherein said ~~network~~ second device is configured to transmit said transmission acknowledgement message to said data marker integrated device.

14. (currently amended): The system of claim 13 wherein said data marker integrated device is configured to delete said stored data mark after receiving said transmission acknowledgement message from said ~~network~~ second device.

15. (currently amended): The system of claim 1 further including a user terminal configured to connect to said server ~~terminal~~.

16. (original): The system of claim 15 wherein said user terminal includes one of a desktop computer, a laptop computer, and a handheld computer.

17. (currently amended): The system of claim 15 wherein said user terminal is connected to said server ~~terminal~~ through TCP/IP protocol.

18. (currently amended): The system of claim 15 wherein said user terminal is configured to receive information corresponding to said data mark from said server terminal.

19. (currently amended): The system of claim 18 wherein said information corresponding to said data mark comprises one or more of the broadcast information selected from the group of broadcast music information consisting of: includes a name of a broadcast music clip corresponding to said data mark, a name of the artist of a broadcast music clip corresponding to said data mark, a name of the album of a broadcast music clip corresponding to said data mark, and a purchase information for a music album corresponding to a broadcast music clip related to said data mark.

20. (currently amended): A method, comprising:  
storing a data mark within a data marking device, as a first device, in response to bookmarking of a broadcast clip;  
receiving, within a second device, said stored data mark from said first device through a first wireless connection ~~communication path~~;  
establishing a second wireless connection from said second device to a server terminal; and  
transmitting said received data mark using ~~said established~~ over said second wireless connection to a user account within a server;  
retrieving information corresponding to said marked data from a storage unit coupled to said server;  
establishing an internet connection between said server and a user terminal; and  
accessing information corresponding to said marked data within said user account on said server through said user terminal.

21. (currently amended): The method of claim 20 wherein said wireless connection ~~communication path~~ includes a wireless communication link configured for operation under a Bluetooth communication protocol.

22. (currently amended): The method of claim 20 further including receiving a device identification code through said wireless connection ~~communication path~~.

23. (original): The method of claim 22 further including transmitting said device identification code using said established connection to said server terminal.

24. (original): The method of claim 20 wherein said connection includes a wireless application protocol connection.

25. (currently amended): The method of claim 20 further including transmitting a transmission acknowledgement message from said server through said second wireless connection.

26. (original): The method of claim 25 further including displaying said transmission acknowledgement message.

27. (previously presented): The method of claim 25 further including deleting said data mark after receiving said transmission acknowledgement message.

Claims 28-29 (canceled)

30. (currently amended): The method of claim [[28]] 20 wherein said retrieved information includes one or more of a name of a broadcast music clip corresponding to said data mark, a name of the artist of a broadcast music clip corresponding to said

data mark, a name of the album of a broadcast music clip corresponding to said data mark, and a purchase information for the purchase of a music album of a broadcast music clip corresponding to said data mark.

31. (currently amended): A method, comprising:  
storing a data mark within a data marking device, as a first device, in response to bookmarking of a broadcast clip;  
transmitting said stored data mark from said first device through a Bluetooth protocol connection to a second device;  
receiving said transmitted data mark by said second device; and  
transmitting said received data mark through a wireless connection which is separate from said Bluetooth protocol connection, to a server;  
retrieving information corresponding to said marked data by said server;  
establishing an internet connection between said server and a user terminal; and  
accessing information corresponding to said marked data on said server through said user terminal.

32. (currently amended): The method of claim 31 further including receiving a device identification code from said first device through said first and second wireless connection by said server.

33. (canceled)

34. (currently amended): The method of claim 31 wherein said second wireless connection includes comprises a wireless application protocol connection.

35. (currently amended): The method of claim 31 further including receiving a transmission acknowledgement message through said second wireless connection by

said second device.

36. (currently amended): The method of claim 35 further including displaying said received transmission acknowledgement message by said second device.

37. (currently amended): The method of claim 31 further including deleting said stored data mark within said first device.

Claims 38-40 (canceled)

41. (currently amended): The method of claim [[38]] 31 wherein said retrieved information includes one or more of: a name of a music clip corresponding to said data mark, a name of a music album corresponding to said data mark, a name of the artist for a music clip corresponding to said data mark, and a purchase information for the purchase of a music album corresponding to said data mark.

42. (currently amended): A data marker integrated device communication system, comprising:

means for storing a data mark within a data marking device, as a first device, in response to bookmarking of a broadcast clip;

means for receiving stored data mark through a first ~~wireless communication-~~ path connection by a second device;

means for establishing a second wireless connection from said second device to a server; ~~terminal; and~~

wherein said first wireless connection is a local, short range, wireless protocol that differs from said second wireless connection;

means for transmitting said received data mark using said ~~established~~ second wireless connection to said server;

Appl. No.: 09/932,621  
Amdt. Dated: 09/19/2006  
Off. Act. Dated: 06/19/2006

means of retrieving information corresponding to said marked data by said server;

means of establishing an internet connection between said server and a user terminal; and

means of accessing information corresponding to said marked data on said server through said user terminal.

43. (currently amended): A data marker integrated device communication system, comprising:

means for storing a data mark within a data marking device, as a first device, in response to bookmarking a broadcast clip;

means for transmitting said stored data mark through a Bluetooth protocol connection which provides a first wireless connection to a second device;

means for receiving said transmitted data mark within said second wireless device; [[and]]

means for transmitting said received data mark through a second wireless connection, which is separate from said first wireless connection, to a server;

means of retrieving information corresponding to said marked data by said server;

means of establishing an internet connection between said server and a user terminal; and

means of accessing information corresponding to said marked data on said server through said user terminal.
